

MAGNIFICO CARBON FIBRE TENDER FENDER

EXIT
CARBON

MADE IN ITALY

DAME NOMINATED

NO MODIFICATION OF THE DECK STRUCTURE.
THE DECK SOCKET ONLY WORKS UNDER
PRESSURE, WITHOUT ANY TENSION.

Venetians have been using Mooring Dolphins for more than 1300 years to safely moor their boats and ships to the pontoons and piers of Venice. They call them *Bricole* and they have only one disadvantage: they can't be moved, because they are heavy and fixed to the bottom.

MAGNIFICO, OUR NEW CARBON BRICOLA, can be easily removed when you don't need it, transforming your superyacht's swimming platform into a safe docking pier when your guests arrive, and back to a spacious swimming platform faster than it takes them to put on their swimsuits!

MAGNIFICO CAN BE EASILY REMOVED WHEN
YOU DON'T NEED IT. BACK TO A SPACIOUS
SWIMMING PLATFORM FAST.

THE INFLATABLE IS MADE WITH A CARBON
TEXTURED SURFACE OR ANY OTHER TEXTURE
DESIRED BY THE CUSTOMER

DESIGNED AND
MANUFACTURED
TO THE HIGHEST
STANDARDS

That means not only a carbon/epoxy pre-preg construction with autoclave curing in female mould, but also that the 2 handles are elegantly recessed, and that the inflatable fender is a top of the line Hypalon® model with special fittings designed for our application.

STYLE FROM
TECHNOLOGY

A Delrin® pad on deck, engaging the deck edge, and a Stainless Steel bracket/hook system on the vertical/stern wall, work together to take most of the stress out of the Stainless Steel manual grip screw on the deck socket, transforming most of the reaction into a distributed pressure over the wide area of the MAGNIFICO foot, rather than a concentrated pulling load on the deck socket.

MAGNIFICO, THE CARBON “BRICOLA”

MATERIAL /
CARBON FIBRE
EPOXY PRE-PREG FABRICS

CONSTRUCTION /
AUTOCLAVE CURING
IN FEMALE MOULD

FITTINGS /
AISI316 STAINLESS STEEL MALE/
FEMALE SYSTEM + FRONTAL BRACKET
